Summary

Motivated individual with a background in managing importing operations, seeking a career transition into web development. Successfully coordinated complex projects and implemented re-engineered processes. Demonstrated expertise in creating user-friendly interfaces using HTML, CSS, and JavaScript to develop dynamic and responsive websites. Strong background in Industrial Engineering combined with a passion for web development and Software Engineering. Committed to delivering high-quality results and exceeding expectations in a fast-paced environment.

Experience

Kobax LLC — Miami, United States
Operation Coordinator — 05/2022 - 04/2023

- Achieved seamless management of end-to-end importing operations for 30+ full container loads per month into the United States, resulting in reliable and timely deliveries to clients across multiple locations.
- Successfully implemented a pricing analysis system, leading to optimized and actionable cost structures, increasing 5% average profitability for orders.
- Conducted thorough analysis and optimization of the logistics process, leading to substantials 20% cost savings and improved financial performance on every shipment.

NielsenIQ — Caracas, VEN
Associate — 08/2020 - 03/2021

- Supported senior executives in establishing and nurturing client relationships with major companies, providing accurate and timely data for strategic decision-making.
- Aggregated and delivered client-specific data on sales, market share, distribution, and price index, facilitating effective performance comparison with competitors.
- Analyzed sales data, creating impactful presentations that guided clients in making strategic decisions using real SWOT analysis and a structured SCQA framework.

Education

Ironhack — Miami, FL
Full Stack Web Development Bootcamp — 03/2023 - 05/2023

- Web development using front end and back end technologies: HTML5, CSS3, JavaScript (ES6), Node.js, Express.js, MongoDB, React.js. Web development best practices with focus on clean code principles and test driven development.

Andres Bello Catholic University — Caracas, VEN
B.S.: Industrial Engineering — 09/2016 - 10/2021

- Focused on optimizing systems for efficiency. Skills in project management, data analysis, and process optimization. Team collaboration for driving innovation in the industrial sector.

Projects

Curiomarket
https://main--rococo-semifreddo-f6db94.netlify.app/

Curiomarket is a full-stack React web marketplace application.

- It utilizes the full MERN stack to enable users to create stores and list items for sale.
- Additionally, it allows users to add items from other users to their shopping cart and proceed to checkout.

Snippetz
https://snippetz.fly.dev/

Snippetz is an Express web application designed for a code snippet saving platform.

- The application provides users with the ability to upload their code snippets and save both their own and others' snippets as favorites.

JavaScript Rhythm Game
https://nel-thedev.github.io/project-game/

This is a game created as the first project for the Ironhack Web Development bootcamp using HTML, CSS and vanilla Javascript.

- It is a 4K-style rhythm game where the player has to press keys and change the color of the player to match the color of the circles.
